**0 5**

A student investigated the temperature change in displacement reactions between metals and copper sulfate solution.

**Table 2** shows the student's results.

**Table 2**

| <b>Metal</b> | <b>Temperature increase in °C</b> |
|--------------|-----------------------------------|
| Copper       | 0                                 |
| Iron         | 13                                |
| Magnesium    | 43                                |
| Zinc         | 17                                |

**0 5****1**

Plot the data from **Table 2** on **Figure 4** as a bar chart.

**[2 marks]**

**Figure 4**

Temperature  
increase  
in °C

Metal

0 5 . 2

The student concluded that the reactions between the metals and copper sulfate solution are endothermic.

Give **one** reason why this conclusion is **not** correct.

[1 mark]

---

---

0 5 . 3

The temperature change depends on the reactivity of the metal.

The student's results are used to place copper, iron, magnesium and zinc in order of their reactivity.

Describe a method to find the position of an unknown metal in this reactivity series.

Your method should give valid results.

A student investigated the colours in three different flowers, **A**, **B** and **C**.

The colours are soluble in ethanol but are insoluble in water.

This is the method used.

1. Crush flower **A**.
2. Add ethanol to flower **A**.
3. Filter the mixture.
4. Put spots of the coloured filtrate on to the chromatography paper.
5. Repeat steps 1-4 with flowers **B** and **C**.

**Figure 4** shows the apparatus used.

**Figure 4**

0 4 . 1

The student made **two** mistakes in setting up the apparatus.

Give **one** problem caused by each mistake.

**[4 marks]**

Mistake 1 \_\_\_\_\_

Problem caused \_\_\_\_\_

\_\_\_\_\_

Mistake 2 \_\_\_\_\_

Problem caused \_\_\_\_\_

\_\_\_\_\_

**0 4 . 2** Another student set up the apparatus correctly.

**Figure 5** represents the student's results.

Give **two** conclusions you can make from **Figure 5**.

**[2 marks]**

- 1 \_\_\_\_\_
- \_\_\_\_\_
- 2 \_\_\_\_\_
- \_\_\_\_\_

**0 4 . 3** Colour **A** has an  $R_f$  value of 0.65

Colour **A** moves 3.2 cm

Calculate the distance moved by the solvent.

**[2 marks]**

\_\_\_\_\_

\_\_\_\_\_

Distance moved by solvent = \_\_\_\_\_ cm

**0 8**

A student investigated how temperature affects the rate of reaction between magnesium carbonate and dilute hydrochloric acid.

This is the method used.

1. Heat hydrochloric acid to 30 °C in a conical flask.
2. Add magnesium carbonate powder to the conical flask.
3. Measure the loss in mass of the flask and contents every 20 seconds for 140 seconds.
4. Repeat steps 1-3 with hydrochloric acid heated to 50 °C

**0 8 . 1**

Explain why the contents of the conical flask lose mass.

Rock salt is a mixture of sand and salt.

Salt dissolves in water. Sand does **not** dissolve in water.

Some students separated rock salt.

This is the method used.

1. Place the rock salt in a beaker.
2. Add 100 cm<sup>3</sup> of cold water.
3. Allow the sand to settle to the bottom of the beaker.
4. Carefully pour the salty water into an evaporating dish.
5. Heat the contents of the evaporating dish with a Bunsen burner until salt crystals start to form.

**0 4****. 1**

Suggest **one** improvement to step 2 to make sure all the salt is dissolved in the water.

**[1 mark]**

Sodium carbonate reacts with dilute hydrochloric acid:

A student investigated the volume of carbon dioxide produced when different masses of sodium carbonate were reacted with dilute hydrochloric acid.

This is the method used.

1. Place a known mass of sodium carbonate in a conical flask.
2. Measure  $10 \text{ cm}^3$  of dilute hydrochloric acid using a measuring cylinder.
3. Pour the acid into the conical flask.
4. Place a bung in the flask and collect the gas until the reaction is complete.

**0 7 . 1**The student set up the apparatus as shown in **Figure 5**.**Figure 5**

Identify the error in the way the student set up the apparatus.

Describe what would happen if the student used the apparatus shown.

**[2 marks]**

---

---

---

---

The student corrected the error.

The student's results are shown in **Table 4**.

**Table 4**

| Mass of sodium carbonate<br>in g | Volume of carbon dioxide gas<br>in cm <sup>3</sup> |
|----------------------------------|--|
| 0.07                             | 16.0   |
| 0.12                             | 27.5   |
| 0.23                             | 52.0   |
| 0.29                             | 12.5   |
| 0.34                             | 77.0   |
| 0.54                             | 95.0   |
| 0.59                             | 95.0   |
| 0.65                             | 95.0   |

**0 7** . **2** The result for 0.29 g of sodium carbonate is anomalous.

Suggest what may have happened to cause this anomalous result.

**[1 mark]**
